DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-4, 8 and 23-34 have been considered but are moot in view of the new ground of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1,2,4,7,8 and 23-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaheen et al. (Shaheen), US Pub. No. 2005/0048969, previously used, in view of Schneider et al. (Schneider), US Pub. No. 2006/0114889, recently discovered.

Regarding claims 1,2,4,7, 8 and 23-34, Shaheen discloses in a data communication system including a wireless subsystem for the transmission of data packets between a server and a wireless handset having a voice/data capability selectable between first and second operating modes, a method of selecting the operating mode of the handset after wireless communication is established between the handset and the subsystem, which comprises the steps of:

associating, with the system, a data base containing data indicative of the operating mode capability of the subsystem; (pages 1-2 [0003] & [0020-0026] pages 3-4 [0039] and pages 4-5 [0047-0056] and see Fig. 2).

Shaheen fails to explicitly disclose transmitting query messages on the system from the handset to the data base to retrieve such capability data; and transmitting query messages on the wireless subsystem from the handset to the database to retrieve the capability data; and operating the handset in the second mode if the retrieved capability data indicates that the subsystem is capable of operation in the second mode transmitting the capability data from the database to the handset in the first operating mode.

In a similar field of endeavor, Schneider discloses transmitting query messages on the system from the handset to the data base to retrieve such capability data; and transmitting query messages on the wireless subsystem from the handset to the database to retrieve the capability data; and operating the handset in the second mode if the retrieved capability data indicates that the subsystem is capable of operation in the second mode transmitting the capability data from the database to the handset in the first operating mode (see [0024,0036,0088]).

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Shaheen to include querying the communication network for capability information for the purpose of allowing connection in a multiservice network.

Allowable Subject Matter

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion
